SUMMARY

Computer Science undergraduate (graduating 2028, CGPA 9.5+) applying for the UX Designer Intern role at YouTube. I build products people can pick up in seconds and design data views that are easy to read. My work combines user-centered design thinking, responsive interface design, interactive prototyping in code, and feedback loops that show what users enjoy. I will return to my full-time degree program after the internship.

EDUCATION

SR University, Warangal, Telangana **Expected Apr 2028**
B.Tech, Computer Science Engineering **CGPA: 9.567/10.0**

- **Relevant Coursework:** Software Engineering, Data Structures, Algorithms, DBMS, Operating Systems, Computer Networks

PROJECTS

Meme Machine: Real-Time Multiplayer Party Game
GitHub Repository | Live Demo

- Designed and built a browser game for 2–8 players using HTML, CSS, and JavaScript on the front end and Node.js, Express, and Socket.IO on the server. Friends join from their own phones with a four-letter room code or invite link, with no app download and no account.
- Made the interface responsive so the same game works on phones and desktops. Shaped the user flow around quick rounds, clear scoring, and a short setup for the host (4, 6, or 8 rounds).
- Planned for real-life friction: players who drop out can reconnect to a live room, and host controls pass to another player if the host leaves. Room state is kept in Upstash Redis and the app is deployed on Vercel.
- Added an optional end-of-match rating and comment prompt, plus a private admin dashboard to review player feedback and usage and to add new game content.

Global Cyber Threat Analytics Dashboard
GitHub Repository

- Built an interactive Power BI dashboard on a decade of global cyber-threat data (2015–2024) with a dark-themed interface designed to be easy to scan.
- Added custom slicers and multi-level filters so non-technical users can explore the data themselves without needing help.
- Used Power Query and DAX to turn raw records into clear KPIs such as financial loss and resolution time, then summarized the high-risk industry patterns into plain-language takeaways for decision makers.

Netflix Content and Audience Analysis
GitHub Repository

- Wrote MySQL queries (joins, subqueries, aggregates) to compare how titles perform across IMDb and TMDB ratings and to see what audiences respond to, and organized the results in Excel.
- Tracked genre and production trends across decades and regions to understand how viewer preferences have shifted, then turned the findings into clear recommendations on what content performs best.

Customer Retention Prediction System
GitHub Repository

- Built an end-to-end Python pipeline to predict telecom customer churn, from data scraping and cleaning to feature engineering and model training.
- Tuned machine learning classification models and evaluated them with ROC/AUC to get reliable predictions on real customer data.

SKILLS

Design and UX: User-Centered Design, User Flows, Responsive Design, Interaction Design, Dashboard Design, Data Visualization, User Feedback Collection, Visual Communication, Storytelling
Programming and Web: Python, C, JavaScript, HTML5, CSS3, Node.js, SQL (MySQL)
Tools: GitHub, VS Code, Power BI, Figma, Microsoft Excel, Vercel, Socket.IO
Core Concepts: Object-Oriented Programming, Software Engineering, Machine Learning, Data Analysis

CERTIFICATIONS

- **AWS Cloud Foundations:** Covered core cloud concepts and services including EC2, S3, SNS, and RDS.
- **DataCamp, Understanding Machine Learning:** Covered supervised and unsupervised learning fundamentals.

ACHIEVEMENTS AND LEADERSHIP

- NCC ‘B’ Certificate Holder
